The Counter Top Water Distiller produces pure distilled clean water. It is easy to operate, easy to clean, a space saver, and mobile. There is no need for water purifiers or cartridges, which reduces pollution. After distillation, the water is transferred through an activated carbon filter, which will remove any unusual odours into the collection bottle. It automatically shuts off when the process is finished.

The average period of use for each filter bag is 1 month. Period of use may vary based on water conditions

Package Includes:

1 - Distiller	1 - Residue cleaner
